

Creating Microservices for account and loan

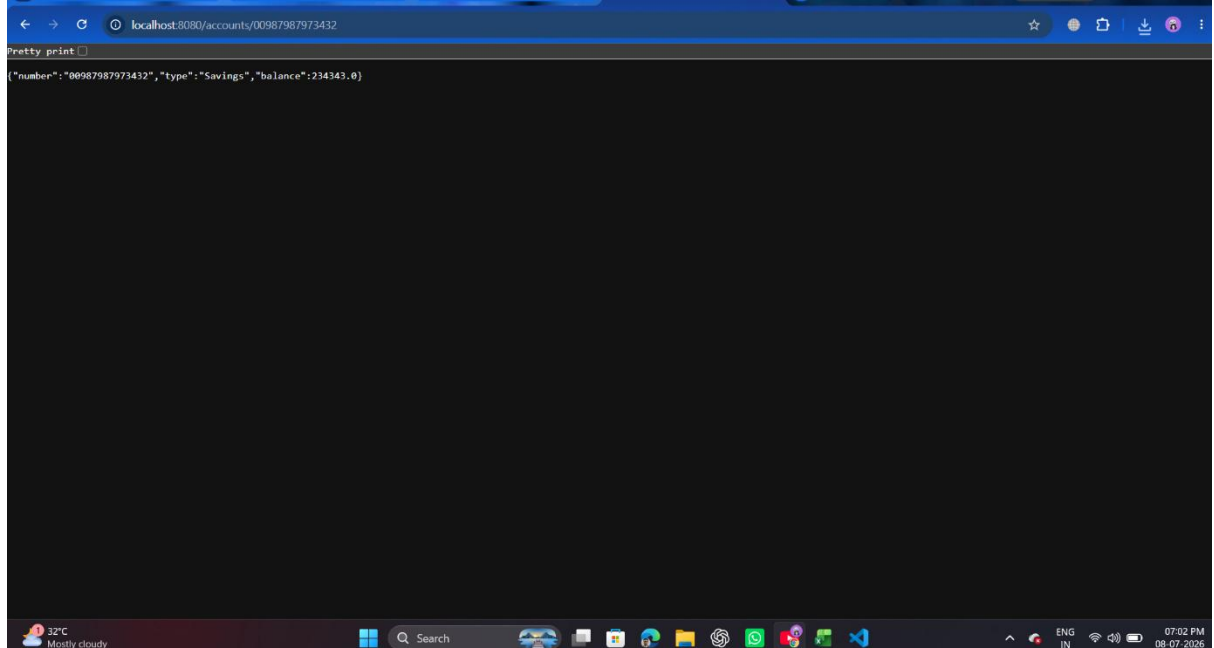

Account

The screenshot shows an IDE with the following components:

- Explorer:** A project structure for 'ACCOUNT' with folders 'src', 'main', 'com', 'controller', 'model', and 'resources'. The 'AccountController.java' file is selected.
- Editor:** Displays the code for 'AccountController.java'. The code is as follows:

```
9 public class AccountController {  
11     @GetMapping("/accounts/{number}")  
12     public Account getAccount(@PathVariable String number) {  
13  
14         return new Account(  
15             number,  
16             "Savings",  
17             234343  
18         );  
19     }  
20 }
```
- Terminal:** Shows the output of running 'mvnw spring-boot:run'. The logs indicate that Tomcat is initialized on port 8080, the service is started, and the application is running successfully. The logs also show the initialization of the Spring DispatcherServlet.

The screenshot shows a web browser with the URL 'localhost:8080/accounts/00987987973432'. The browser displays the response from the API, which is a JSON object:

```
{ "number": "00987987973432", "type": "Savings", "balance": 234343.0 }
```

Loan

The screenshot shows an IDE with the following components:

- EXPLORER:** A file tree on the left showing the project structure. The file `LoanApplication.java` is selected.
- EDITOR:** The main workspace showing the code for `LoanApplication.java`. The code is as follows:

```
1 server.port=8081
```
- TERMINAL:** A terminal window at the bottom showing the command `spring-boot:run` and its output. The output includes logs for the application starting, the Tomcat server initializing, and the application running on port 8081.

The screenshot shows a web browser window with the address `localhost:8081/loans/H00987987972342`. The browser displays a JSON response from a REST client, which is as follows:

```
{ "number": "H00987987972342", "type": "Car", "loan": 400000.0, "emi": 3258.0, "tenure": 18 }
```
